**Suggestions For Sowing Seeds During the
Summer Months**

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snapdragon, and finer perennial seeds, etc. should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, then taken to greenhouse and some cheesecloth placed over them until the seedlings are of sufficient strength to have it removed.

The Sweet-Scented Gladiolus

MURIELAE

Also called Acidanthera

This bulb grows very vigorously to a height of from two to two and one half feet. It comes in bloom in the late summer and is very sweetly scented. It is not a heavy odor, but very delicate, like an Arbutus. When cut and placed in a vase, it is a pleasant sensation to smell. The flowers are white with clearly marked penciling of deep lavender, in particular on the lower petals.
